

2018 provisional data for the United States | Chikungunya virus | CDC

2018 provisional data for the United States

- Chikungunya virus disease became a nationally notifiable condition in 2015. Cases are reported to CDC by state and local health departments using standard case definitions.
- As of July 24, 2018, a total of 26 chikungunya virus disease cases with illness onset in 2018 have been reported to ArboNET from 14 U.S. states (Table & Map). All reported cases occurred in travelers returning from affected areas. No locally-transmitted cases have been reported from U.S. states.
- A total of zero chikungunya virus disease cases with illness onset in 2018 have been reported to ArboNET from U.S. territories (Table).

States reporting chikungunya virus disease cases – United States, 2018 (as of July 24, 2018)

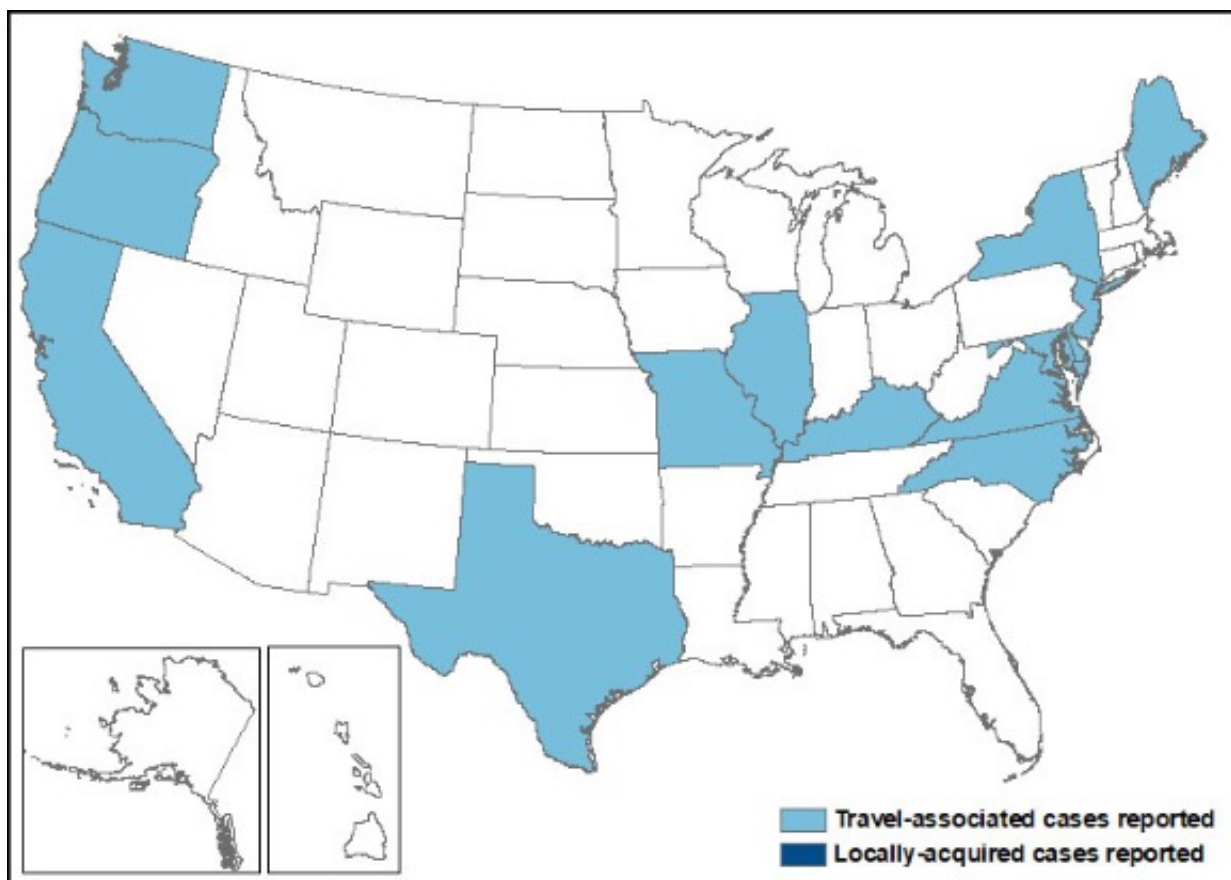

Table. Laboratory-confirmed chikungunya virus disease cases reported to ArboNET by state or territory – United States, 2018 (as of July 24, 2018)
